LinkedIn: linkedin.com/in/leo-corona

Education

- **Tecnológico de Monterrey** — Monterrey, Mexico
  B.S. in Computer Science and Technology | GPA: 3.84/4.0 — *August 2021 – December 2025*
- **University of Naples Federico II** — Naples, Italy
  Apple Developer Academy — *September 2024 – June 2025*

Experience

- **Junior iOS Developer** — Monterrey, Mexico
  Banregio — *March 2026 – September 2026*

  Developed and maintained **large-scale iOS apps** for banks Banregio and Hey Banco, as well as their internal Swift libraries. Fixed emerging bugs across various app modules and **improved usability** of features mainly related to credit card payment.
  - **VIPER Pattern**: Maintained extensive codebases where every app feature corresponds to a VIPER module, enabling complex navigation and data flows. Every module was remotely configurable with feature flags.
  - **Modern Concurrency**: Developed a CLI tool in Swift for automating Xcode tasks: handling dependencies, building/exporting IPA files, and clearing caches. Used swift-subprocess to perform concurrent work, leveraging modern async/await syntax.
  - **Scalable Enum Design**: Designed code heavily oriented around Swift's enums, keeping states of the application explicit & future-proof, and avoiding conflict with existing behavior. Used versioned APIs to ensure backward-compatibility.
  - **Agile Development**: Executed work in sprints, organized around user stories. Integrated code changes using the GitFlow model. Ensured consistency of the apps' interfaces across platforms, alongside Android developers and a Product Owner.
  - **CI/CD Pipelines**: Generated protected app builds for QA and production using Jenkins and Apple's Transporter.
- **Software Engineer (Freelance Contract)** — Monterrey, Mexico
  Innovaction Gym — *January 2024 – July 2024*

  Led a team of three in agile software development, building a **full-stack Next.js** web application for a COIL platform connecting more than 10 universities, and projected to reach 1000 users in its first year.
  - **Product Owner**: Elicited & documented requirements with the client using interviews and SRS documents.
  - **Cost Analysis**: Performed a Function Point analysis to predict duration and cost of development. Established the team's quotation for development and hosting.
  - **Secure File Uploads**: Implemented business logic for uploading and viewing academic publications. Utilized Supabase file storage, including per-user access control measures.
- **Back-End Developer (Freelance Contract)** — Monterrey, Mexico
  RT Conducción Integral — *April 2023 – August 2023*

  Using Django, built the back end of an IoT application for Nuevo León's **water service company**, resulting in improved water delivery efficiency for small businesses, and data analytics for administrators.
  - **REST API Design**: Designed, built and thoroughly documented REST API endpoints, as well as a secure user role system.
  - **Clean Patterns**: Ensured code quality by adhering to PEP8 standards and Django's MVC architecture.
  - **Automated Tests**: Conducted API and database tests within the Django application using automated scripts.

Recent iOS & Apple Projects

- **Semitones**: Published an instrument tuning app for iOS. Winner of Apple's **Swift Student Challenge**. Powered by native frameworks: SwiftUI, UIKit, Accelerate, and CoreAnimation. Available now on the **App Store**.
- **Hear Me Out!**: Multiplayer debate party game, designed for **Apple TV** & **iPhone** devices. With Apple's MultipeerConnectivity framework, players use their iPhone devices to interact with the TV. Available now on the **App Store**.
- **Aqualia**: Developing an app for intuitive insight on the water quality of Naples, Italy, utilizing MapKit & Swift Charts. Available on TestFlight. Currently working on localization & integration with official data sources.

Recent Web Projects

- **dominoes.mx**: Developing and maintaining an online domino game with more than **1400 active users**, made with SvelteKit & WebSocket as a personal project with my father. Currently improving the **bot player algorithm** and the usage analytics system.
- **DEVOTION**: Developed a Google-integrated project management web application with Angular & Django, capable of tracking nested projects & tasks, aimed at elevating the ease of collaboration of student groups at Tec de Monterrey.

Skills

- **Spoken Languages**: Spanish (Native), English (C2), Italian (B1)
- **Programming Languages**: Swift, Python, TypeScript, JavaScript, Java, Objective-C, Rust, SQL, Matlab
- **iOS Development**: SwiftUI, UIKit, CoreAnimation, Core/SwiftData, MapKit, Accelerate, MultipeerConnectivity, SPM, CocoaPods
- **Web Development**: SvelteKit, Django REST Framework, Next.js, WebSocket, Docker, AWS, Vercel, JWT, OAuth 2.0, Tailwind CSS
- **Other**: API Design, API Documentation, Data Modeling, Mobile UI/UX, Bash/Zsh, Cisco IOS, GitFlow, E2E Testing, Jenkins
